

# Automated Security Validation™

## Why Choose Pentera?

Reduced Threat and Ransomware Impact

Hardened Network and Security Readiness

Accelerated validation-remediation cycle

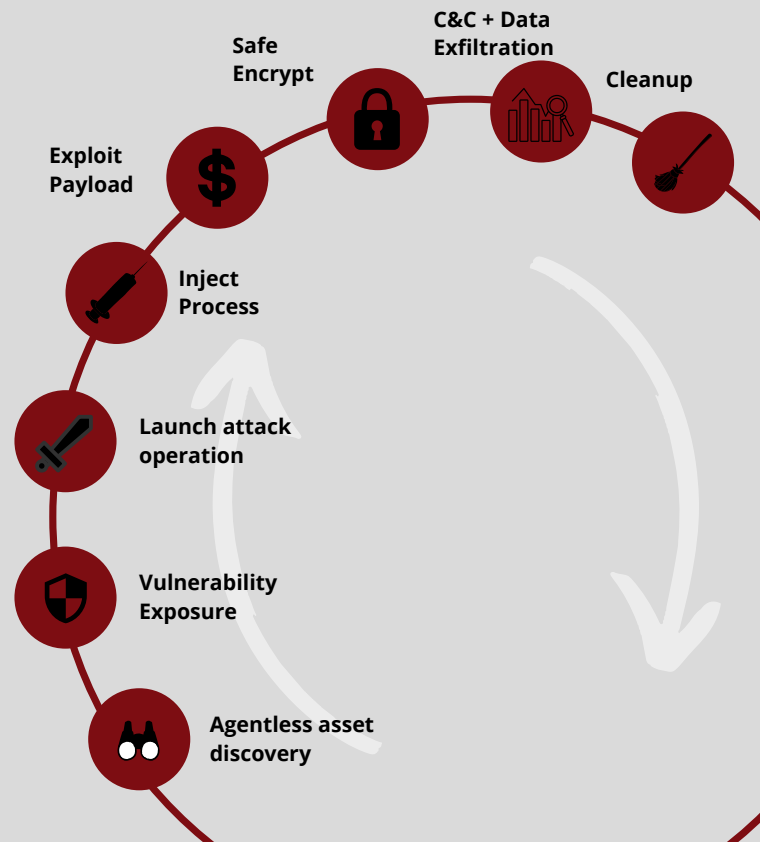

Continued Efficacy of your Security Program

### Key Capabilities:

#### Secure Work-from-anywhere

With Pentera, no special skills are required. Security teams of all sizes and maturity levels can begin to gain visibility to the efficacy of their security controls and the organization's readiness to a ransomware attack. Automated Security Validation (SecVal) is how we flip on the light to focus on our real security gaps and guide cost-effective remediation. With it, cyber professionals can surgically remediate with fresh data that is based on threats' real impact on their business. With Pentera, spend more time supporting the business and less time patching irrelevant vulnerabilities.
